Trigger Spray

Product Overview

SteriKleen is a virucidal disinfectant solution that is an approved ready-to-use, concentrated, food safe, multi-purpose, mildly alkaline detergent engineered to effectively treat a wide variety of surfaces requiring sanitizing, disinfecting, or odor reduction. It is used to disinfect any hard surface and is rated as effective for the destruction of a wide range of viruses and pathogens. It has a 60 second kill time.

Use

This quaternary ammonium compound is typically used in food processing and industrial areas to disinfect and clean hard surfaces. It is an effective one step sanitizer for any premises or industry with hard contact surfaces that requires industrial level sanitization and disinfection. Effective for a fast, efficient solution to large area crisis management.

Recommended for use in, but not limited to:

- Hospitals & Care Facilities
- Public & Private Transportation Vehicles
- Food Processing Plants
- Garbage & Recycling Facilities
- Containers & Equipment

4 L Vanguard RTU
Surface Disinfectant

Product Overview

Achieve optimal disinfection without worrying about proper dilution and carrying dilution systems. Vanguard RTU is designed to simplify the cleaning and disinfecting process while remaining a safe alternative for your staff – no PPE required. The same great formula and results you have come to expect from Vanguard in the convenience of a pre-diluted, ready-to-use product.

Use

Ready-to-use. For surfaces and/or objects that may come into direct contact with children at the mouthing stage of development a rinse with potable water is recommended. This product is not for use on critical and semi-critical medical device surfaces. Apply directly to hard nonporous surfaces (e.g. counters, floors, walls). Wipe surface using a sponge or cloth. Heavily soiled surfaces must be cleaned prior to disinfection. Thoroughly apply solution to wet the surface. For disinfection, allow to remain wet for 10 minutes then

ASTM Level 3

KN95 Face Mask

A step above a surgical mask that provides more respiratory protection than a surgical or cloth mask and that can be used in certain clinical settings. Five layers of high quality non-woven, hot air cotton using regulatory melt-blown fabric technology and rated to capture 95% of 0.3-micron particles. KN95 masks do a good job of preventing virus transmission and have strong breathability standards.

ASTM RATINGS - ASTM International sets the preferred standard in healthcare for best practices and requirements for performance and materials in masks. They follow FDA guidelines in the four main areas of Fluid Resistance, Differential Pressure, Filter Efficiency and Flammability.

Surgical Mask – ASTM Level 3 (3 Layer)

Level 3 provides maximum barrier protection for heavy levels of aerosols, spray and/or fluids. It has more protection than Level 2 against fluid transmission while still providing great comfort and breathability. Used for high-velocity procedures that protect both the patient and wearer from the transfer of bodily fluids, micro-organisms, and particulate matter.

Medical Mask – ASTM Level 3 (3 Layer) – with Visor/Shield

The same maximum barrier protection mask as the ASTM Level 3 Surgical – 3 Layer Mask but includes an eye visor that is attached with Velcro. The visor may be attached and detached as needed.

Medical Mask – ASTM Level 2 (3 Layer)

A moderate barrier protection mask for low to moderate levels of aerosols, spray and/or fluids. The difference in protection between a Level 2 mask and a Level 3 mask is minimal but it provides twice the protection from a Level 1. It is comfortable and provides good protection.
